

### **PETROLEUM STORAGE TANK SITE ASSESSMENT**

Green Star offers a comprehensive program for investigation and management of underground storage tank (UST) facilities. Green Star has extensive experience with a wide variety of UST solutions, and provides services ranging from compliance inspections to facility investigations, risk-based assessments, remediation and closure. This knowledge and experience form the basis from which we assess a petroleum storage tank system. The same knowledge and experience is employed in rendering our evaluation of the proper plan of action for each site. We provide our clients with complete solutions to complicated environmental challenges, and assist them in designing programs that will help to prevent future concerns.

In keeping with our philosophy of providing superior customer service, our project managers interface with regulatory agencies on the client's behalf throughout the course of the project. It is our goal to make your environmental issues as painless as possible. Our underground storage tank services include:

- ★ Subsurface soil and groundwater investigations
- ★ Monitoring well installation and groundwater sampling
- ★ Contaminant source determination
- ★ Soil-gas surveys
- ★ Vadose zone monitoring
- ★ Corrective Action Plans and remedial design and implementation
- ★ UST compliance audits
- ★ UST upgrade recommendations, design and installation
- ★ LPST remediation fund analysis and tracking
- ★ Long term UST management plans
- ★ Remediation fund applications and reimbursement
- ★ Site restoration

Green Star is a registered LPST Corrective Action Specialist with the State of Texas and an Approved Corrective Action Contractor with the State of Tennessee.

Green Star in-house Corrective Action Project Managers and Tennessee Registered Professional Geologists are responsible for generating all corrective action plans. Our UST program is structured to comply with the reimbursement cost guidelines set forth by the States of Arkansas, Tennessee, and Texas.

Green Star's UST management services are designed to minimize facility downtime and provide affordable solutions for the environmental concerns related to USTs.
